

X-VIEW

X-View Remote Control

Remote control of X-View Multiviewers is simple, quick and easy with the X-View remote keypad.

Each unit is custom programmed to individual requirements, where key layouts and functions can be designated to suit individual requirements and provides true customisation relevant to individual users.

A full set of keypad labels in required font and language is provided with each unit at no extra cost; you can define your own key layout and function or use our suggested layout for each device to be controlled.

Unique features of the X-View remote keypad include the ability to control up to four separate items of equipment all from the same unit, i.e. Control of X-View Multiviewers and switching matrix and source display controls is possible all from one keypad unit.

X-View remote control keypads can be reprogrammed for changes in equipment or functionality, thus future proofing your investment.

The X-view remote control keypad range encompasses a wide range of solutions for remote controls, with larger keypads, touch screens and remote jog/shuttle VTR control solutions, and please enquire if you require something more specific for your project.

Specification
